

EmbedKit - Production Embedding Pipeline Toolkit

Maharshi Soni | [vector-search](#) | [advanced](#)

Description

A pip-installable toolkit for building embedding pipelines. Multiple chunking strategies, embedding generation with caching, unified vector store interface supporting FAISS and in-memory backends.

Tech Stack

sentence-transformers, faiss-cpu, numpy, click, pydantic, pytest

Features

- Multiple chunking strategies
- Embedding generation with disk caching
- Vector store abstraction: FAISS and in-memory
- Hybrid search: vector + BM25
- CLI tool for indexing and querying

Sample Input

Documents to index and search

```
embedkit index --input docs/ --store my_index
```

Sample Output

Search results with similarity scores

```
embedkit search --query 'machine learning' --top-k 5
```
